

# Trauma Nursing Core Course

## Designed for Nurses by Nurses

### Why You Need TNCC

Optimal trauma patient care is best accomplished when all trauma team members use a systematic, standardized approach to injured patient care. You can help significantly reduce morbidity and mortality of trauma patients by educating yourself on how to be a stronger trauma care team member.

TNCC provides you with cognitive, core-level trauma knowledge and psychomotor skills experience in an interactive format. The hands-on psychomotor skill stations help you incorporate cognitive knowledge into application of skills in a safe practice environment. You'll benefit from having one faculty member for at least every six learners.

### Highlights Include:

- Abdominal, pediatric and pregnancy trauma
- Airway and ventilation interventions
- Initial assessment and shock
- Spinal immobilization
- Chest trauma and traction splinting
- Opportunity to earn 14.42 contact hours

### What Experience Do You Need?

It is recommended that you have at least six months clinical nursing experience in an emergency care setting before taking the course. It is assumed that you will also have an understanding of initial trauma care terminology and are familiar with standard emergency trauma equipment.

### Take the Course Today

To verify why TNCC is right for you, visit [www.ena.org/coursesandeducation](http://www.ena.org/coursesandeducation).

In accordance with the Americans with Disabilities Act, please let us know if you have any disability that requires special materials and/or services so that appropriate personnel can be advised.

*The **Emergency Nurses Association** is accredited as a provider of continuing nursing education by the American Nurses Credentialing Center's Commission on Accreditation.*
